7.1.3 Facilities and initiatives for management of various types of degradable and non-degradable waste

Solid Waste Management:

A well planned Waste Management System helps to maintain a clean and green campus. Dustbins are placed in the classrooms, staffrooms and common areas to collect the waste. This solid waste is disposed regularly.

The College has installed a Vermicompost unit where the hostel and canteen green waste and food waste is converted into good compost in an eco-friendly manner. This compost is used for the gardens in the College.

Plastic waste and broken glass pieces from the labs are segregated and disposed. The plastic, metal and other recyclable wastes are collected and sold to authorized vendors. Incinerators are provided in ladies room and hostel.

Liquid Waste Management

Water used for hand wash in various departments is disposed through pits. In the Chemistry and Botany laboratories, the concentrated acids are diluted, neutralized and then disposed.

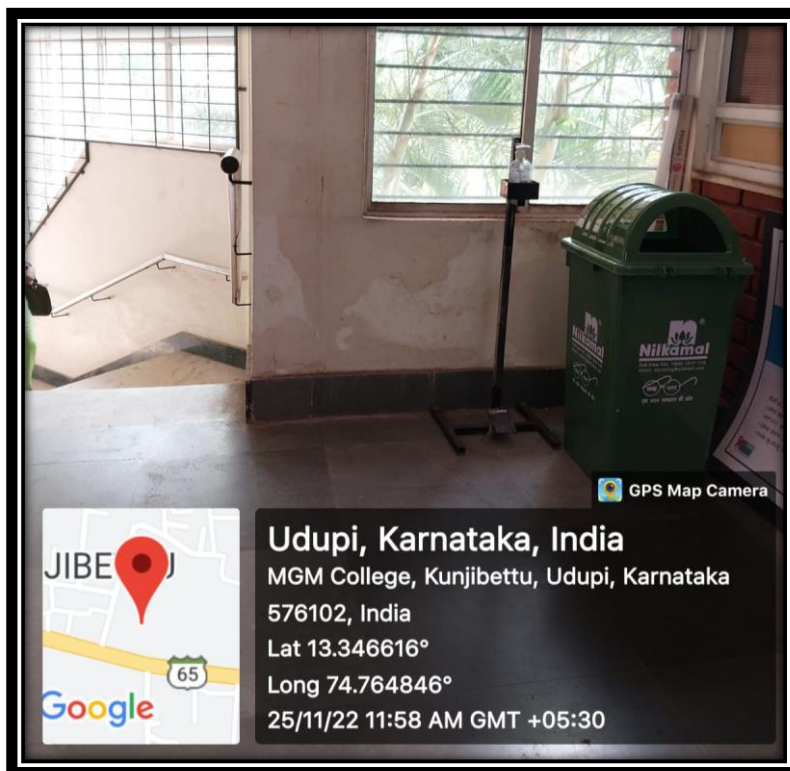

E-Waste Management

Separate bin is placed in Computer Science Block to collect the E-waste from all other Departments. The collected material is sent for recycling through an authorized vendor. The use of rewritable USB devices, additional hard disks to store excess data and use of E-mails are promoted to control the usage of the paper.

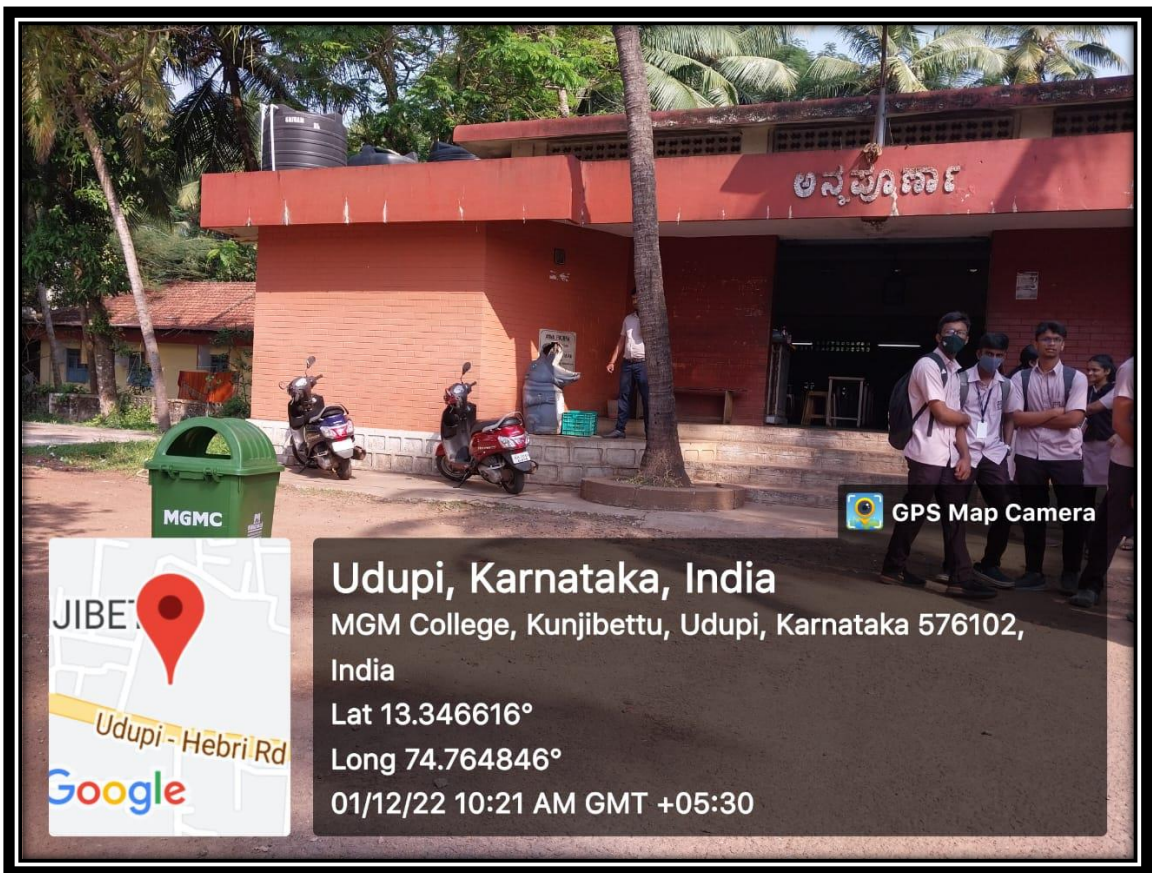

Vermicompost Unit

Dustbins are placed across the campus, in classrooms, corridors and laboratories.

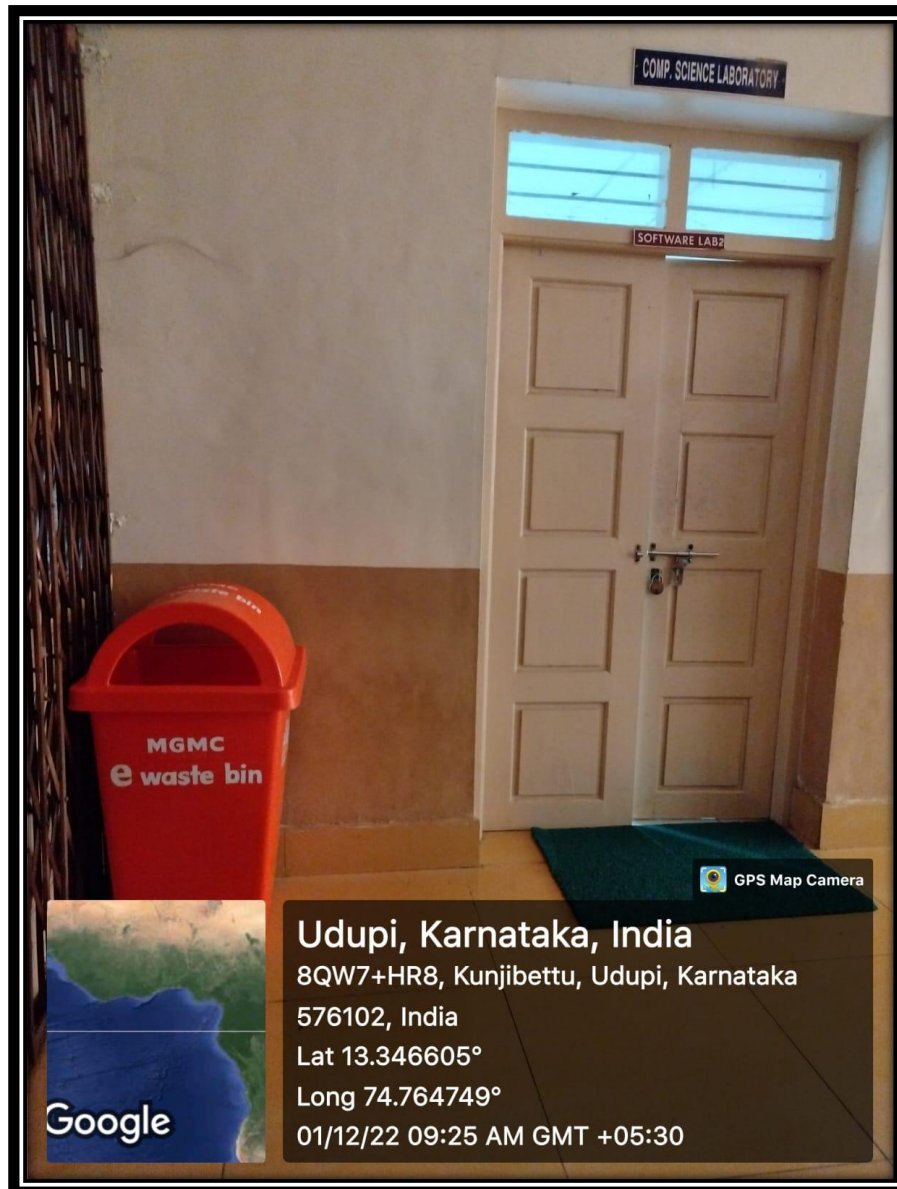

Dustbins placed across the corridors and campus
